The ongoing charges figure for the Policy Bank Bond ETF (as defined below) is based on expenses for the year ended 31 December 2023. This figure may vary from year to year. It represents the sum of the ongoing expenses chargeable to the Policy Bank Bond ETF expressed as a percentage of the average net asset value ("NAV").

This is the actual tracking difference of the calendar year ended 31 December 2023. Investors should refer to the website of the Policy Bank Bond ETF for more up-to-date information on actual tracking difference.

iShares Short Duration China Policy Bank Bond ETF

What is this product?

This is a fund constituted in the form of a unit trust established under Hong Kong law and is a sub-fund of the iShares Asia Trust. The units of the iShares Short Duration China Policy Bank Bond ETF (the “**Policy Bank Bond ETF**”) are listed on The Stock Exchange of Hong Kong Limited (“**SEHK**”). These units are traded on SEHK like listed stocks. The Policy Bank Bond ETF is a passively managed index tracking ETF falling under Chapter 8.6 of the Code on Unit Trust and Mutual Funds.

Objective and Investment Strategy

Objective

The Policy Bank Bond ETF aims to provide investment results that, before fees and expenses, closely correspond to the performance of the FTSE Chinese Policy Bank Bond 6 Months-3 Years Index (the “**Underlying Index**”).

Investment Strategy

The Policy Bank Bond ETF primarily adopts a representative sampling investment strategy to achieve its investment objective. A representative sampling investment strategy involves investing in a representative sample of the securities with high correlation to the Underlying Index (either directly or indirectly) selected by the Manager.

The Policy Bank Bond ETF will invest primarily in RMB denominated and settled fixed-rate and zero coupon bonds issued by the China Development Bank, the Agricultural Development Bank of China or the Export-Import Bank of China (the “**Policy Banks**”) and distributed within the PRC (“**Policy Bank Bonds**”), with a term of 6 months to 3 years, which are included as constituents of the Underlying Index. The Policy Bank Bond ETF may from time to time hold Policy Bank Bonds that are not included in the Underlying Index, as well as other onshore and offshore RMB-denominated bonds and other securities, when the Manager believes that it will help the Policy Bank Bond ETF achieve its investment objective. Up to 100% of the NAV will be invested in Policy Bank Bonds. As the Underlying Index comprises only Policy Bank Bonds, there is no credit rating requirement for inclusion in the Underlying Index. The issuer credit rating of the Policy Banks as the issuers of Policy Bank Bonds is A+ by Standard & Poor’s and A1 by Moody’s.

Exposure to Policy Bank Bonds will be gained primarily via investing in the PRC inter-bank bond market through the “Bond Connect” for up to 100% of the NAV. The Policy Bank Bond ETF may also utilise the “Foreign Access Regime”, which allows foreign institutional investors to invest in the PRC inter-bank bond market, and/or other means as may be permitted by the relevant regulations from time to time. Investment via the Foreign Access Regime will be less than 30% of the NAV. Not more than 30% of the NAV may be invested in Government and other Public Securities (as defined in the Prospectus) of the same issue; and the Policy Bank Bond ETF may invest all of its assets in Government and other Public Securities in at least 6 different issues.

The Policy Bank Bond ETF may also invest in other investments including, futures contracts, index futures contracts, options on futures contracts and options related to the Underlying Index, local currency and forward currency exchange contracts, swaps and cash and cash equivalents (including money market instruments) for both non-hedging purposes and hedging purposes, which the Manager believes will help the Policy Bank Bond ETF achieve its investment objective. The Policy Bank Bond ETF may invest in onshore and offshore financial derivative instruments (“**FDIs**”). In respect of onshore FDIs, only onshore foreign exchange forward contracts are accessible through Bond Connect and will be used for hedging purposes only as of the date of this document. In addition, it may invest in one or more ETFs for cash management and contingency purposes only and if the Manager considers that investing in them is in the best interests of the Unitholders. It may invest up to 10% of its NAV in one or more ETFs, which may be eligible schemes or non-eligible schemes and may or may not be authorised by the SFC, including those which are managed by the Manager, any of the Sub-Managers, their Connected Persons or other third parties. The Manager intends to treat such ETFs as collective investment schemes for the purposes of and subject to the requirements in Chapters 7.11, 7.11A and 7.11B of the Code.

iShares Short Duration China Policy Bank Bond ETF

Although the Policy Bank Bond ETF may enter into securities lending transactions to a maximum level of 50% of its NAV, the Manager does not expect securities lending transactions in respect of the Policy Bank Bond ETF to exceed one-third of the NAV. The Manager will be able to recall the securities lent out at any time.

As part of the securities lending transactions, the Policy Bank Bond ETF must receive cash and/or non-cash collateral of at least 100% of the value of the securities lent. The collateral will be marked-to-market on a daily basis and be safekept by the Trustee (or its nominee, agent or delegate, or delegate(s) or agent(s) further appointed by such nominee, agent or delegate). Non-cash collateral received in connection with a securities lending transaction may not be sold, reinvested or pledged by the Policy Bank Bond ETF. Any reinvestment of cash collateral received shall be subject to the requirements as set out in the Code and the relevant sections of the Prospectus. To the extent the Policy Bank Bond ETF undertakes securities lending transactions, all revenues (net of direct and indirect expenses as reasonable and normal compensation for the services rendered by the Manager, a securities lending agent and/or other service providers in the context of such transactions to the extent permitted by applicable legal and regulatory requirements) shall be returned to the Policy Bank Bond ETF. The costs relating to securities lending transactions will be borne by the securities lending agent or the borrower.

Save for the foregoing, the Policy Bank Bond ETF currently does not intend to (i) invest in urban investment bonds (城投債), or (ii) engage in any sale and repurchase transactions, reverse repurchase transactions or other similar over-the-counter transactions. The Manager may switch between the representative sampling and the full replication investment strategies without notice to investors and in its absolute discretion.

Underlying Index

The Underlying Index is a market capitalisation-weighted index and comprises fixed-rate and zero coupon policy bank bonds with a remaining term to final maturity of 6 months to 3 years issued by the China Development Bank, the Agricultural Development Bank of China, and the Export-Import Bank of China in mainland China. The eligible Chinese Policy Banks are state-owned and their objectives typically include providing social benefit, stimulating the economy, and supporting growing local industries. The composition of the Underlying Index excludes central bank bills, private placements, callable and puttable bonds and bonds issued prior to 1 January 2005.

The Underlying Index is a total return index, meaning that the performance of the index is calculated on the basis that dividends are reinvested. It was launched on 26 July 2021. The base date of the Underlying Index is 30 April 2014. The Underlying Index is compiled and managed by FTSE International Limited. The Underlying Index is denominated and quoted in RMB. The Manager and its connected persons are independent of the index provider of the Underlying Index. As of 31 March 2024, it had a total market capitalisation of RMB8,319.05 billion and 78 constituents.

For details (including the last closing index level, constituents of the Underlying Index and their respective weightings, and other important news), please refer to the website of the index compiler at www.ftserussell.com. The Underlying Index's Bloomberg ticker is CFIICP6C.

Use of derivatives / investment in derivatives

The Policy Bank Bond ETF's net derivative exposure may be up to 50% of its NAV.

What are the key risks?

Investment involves risks. Please refer to the Prospectus for details including the risk factors.

1. General investment risk

The Policy Bank Bond ETF's investment portfolio may fall in value due to any of the key risk factors below and therefore your investment in the Policy Bank Bond ETF may suffer losses. There is no guarantee of the repayment of principal. There is no assurance that the Policy Bank Bond ETF will achieve its investment objective.

iShares Short Duration China Policy Bank Bond ETF

2. Risks associated with PRC inter-bank bond market and Bond Connect and Foreign Access Regime

- Investing in the PRC inter-bank bond market via Bond Connect and/or Foreign Access Regime is subject to regulatory risks and various risks such as volatility risk, liquidity risk, settlement and counterparty risk as well as other risk factors typically applicable to debt securities. The relevant rules and regulations are subject to change which may have potential retrospective effect. If a counterparty defaults in delivering securities, the trade may be cancelled which may adversely affect the value of the Policy Bank Bond ETF.
- In the event that the relevant PRC authorities suspend trading through Bond Connect or account opening or trading on the PRC inter-bank bond market, the Policy Bank Bond ETF's ability to invest in the PRC inter-bank bond market will be adversely affected. Where a suspension in the trading through Bond Connect is effected, the Policy Bank Bond ETF will have to increase its reliance on the Foreign Access Regime, and its ability to achieve its investment objective could be negatively affected.

3. Risks associated with debt securities

- *Credit / Counterparty risk:* The Policy Bank Bond ETF is exposed to the credit/default risk of issuers of the debt securities that the Policy Bank Bond ETF may invest in.
- *Interest rate risk:* Investment in the Policy Bank Bond ETF is subject to interest rate risk. In general, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- *Volatility and liquidity risk:* The debt securities in Chinese markets may be subject to higher volatility and lower liquidity compared to more developed markets. The prices of securities traded in such markets may be subject to fluctuations. The bid and offer spreads of the price of such securities may be large and the Policy Bank Bond ETF may incur significant trading costs.
- *Downgrading risk:* The credit rating of a debt instrument or its issuer may subsequently be downgraded. In the event of such downgrading, the value of the Policy Bank Bond ETF may be adversely affected. There is no assurance that the Policy Bank Bonds invested by the Policy Bank Bond ETF or the issuers of the Policy Bank Bonds will continue to have an investment grade rating or continue to be rated.
- *Policy bank risk:* The Policy Bank Bond ETF's investment in securities issued by the Policy Banks may be exposed to political, social and economic risks. In adverse situations, the Policy Banks may not be able or willing to repay the principal and/or interest when due or may request the Policy Bank Bond ETF to participate in restructuring such debts. The Policy Bank Bond ETF may suffer significant losses when there is a default of any Policy Bank.
- *Valuation risk:* Valuation of the Policy Bank Bond ETF's investments may involve uncertainties and judgmental determinations. If such valuation turns out to be incorrect, this may affect the NAV calculation of the Policy Bank Bond ETF.
- *Credit rating risk:* Credit ratings assigned by rating agencies are subject to limitations and do not guarantee the creditworthiness of the security and/or issuer at all times.

4. New index risk

The Underlying Index is a new index. The Policy Bank Bond ETF may be riskier than other exchange traded funds tracking more established indices with longer operating history.

5. Geographical concentration risk and China investment risks

- The Underlying Index tracks the performance of a single geographical region, namely the PRC and is concentrated in bonds of a few issuers. The NAV of the Policy Bank Bond ETF is therefore likely to be more volatile than a more broad-based fund, such as a global bond fund, as the Underlying Index is more susceptible to fluctuations in value resulting from adverse changes in the financial condition of the Policy Banks and changes in economic or political conditions which affect the PRC.
- Investments in the PRC may involve increased risks and special considerations not typically associated with investment in more developed markets, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and the likelihood of a high degree of

iShares Short Duration China Policy Bank Bond ETF

volatility.

6. Foreign exchange risk and RMB currency and conversion risk

- The Policy Bank Bond ETF's base currency is in RMB but has units traded in HKD and USD (in addition to RMB). Accordingly secondary market investors may be subject to additional costs or losses associated with foreign currency fluctuations between the base currency and the trading currencies when trading units in the secondary market.
- RMB is currently not freely convertible and is subject to exchange controls and restrictions. Non-RMB based investors are exposed to foreign exchange risk and there is no guarantee that the value of RMB against the investors' base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investor's investment in the Policy Bank Bond ETF.
- Although offshore RMB (CNH) and onshore RMB (CNY) are the same currency, they trade at different rates. Any divergence between CNH and CNY may adversely impact investors. Under exceptional circumstances, payment of redemptions and/or dividend payment in RMB may be delayed due to the exchange controls and restrictions applicable to RMB.

7. PRC tax risk

- There are risks and uncertainties associated with the current PRC tax laws, regulations and practice in respect investments in the PRC via Bond Connect or Foreign Access Regime. Any increased tax liabilities on the Policy Bank Bond ETF may adversely affect its value. Please refer to the Prospectus for details on the Manager's tax provisioning policy.
- Based on professional and independent tax advice, the Policy Bank Bond ETF will not make any PRC withholding income tax and value added tax provisions on (i) gross realised and unrealised capital gains derived from its disposal of debt instruments issued by the PRC issuers; (ii) interest derived from its investment in PRC government bonds and local government bonds; and (iii) interest derived during the period from 7 November 2018 to 6 November 2021 from its investment in PRC non-government bonds.

8. Risks associated with investment in FDIs

Risks associated with FDI include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. The leverage element/component of an FDI can result in a loss significantly greater than the amount invested in the FDI by the Policy Bank Bond ETF. Exposure to FDI may lead to a high risk of significant loss by the Policy Bank Bond ETF.

9. Securities lending transactions risks

- The borrower may fail to return the securities in a timely manner or at all. The Policy Bank Bond ETF may as a result suffer from a loss or delay when recovering the securities lent out. This may restrict the Policy Bank Bond ETF's ability in meeting delivery or payment obligations from redemption requests.
- As part of the securities lending transactions, the Policy Bank Bond ETF must receive at least 100% of the valuation of the securities lent as collateral marked-to-market on a daily basis. However, there is a risk of shortfall of collateral value due to inaccurate pricing of the collateral, adverse market movements in the collateral value, change of value of securities lent or if a borrower does not provide additional collateral when required. This may cause significant losses to the Policy Bank Bond ETF. The Policy Bank Bond ETF may also be subject to liquidity and custody risk of the collateral, as well as legal risk of enforcement.
- By undertaking securities lending transactions, the Policy Bank Bond ETF is exposed to operational risks such as delay or failure of settlement. Such delays and failure may restrict the Policy Bank Bond ETF's ability in meeting delivery or payment obligations from redemption requests.

10. Passive investment risk

The Policy Bank Bond ETF is passively managed and the Manager will not have the discretion to adapt to market changes due to the inherent investment nature of the Policy Bank Bond ETF. Falls in the Underlying Index are expected to result in corresponding falls in the value of the Policy Bank Bond ETF.

iShares Short Duration China Policy Bank Bond ETF

11. Tracking error risk

The Policy Bank Bond ETF may be subject to tracking error risk, which is the risk that its performance may not track that of the Underlying Index exactly. This tracking error may result from the investment strategy used, fees and expenses, liquidity of the index constituents and changes to the Underlying Index. The Manager will monitor and seek to manage such risk in minimising tracking error. There can be no assurance of exact or identical replication at any time of the performance of the Underlying Index.

12. Trading differences risks

As the PRC inter-bank bond market may be open when units in the Policy Bank Bond ETF are not priced, the value of the securities in the Policy Bank Bond ETF's portfolio may change on days when investors will not be able to purchase or sell the units. Differences in trading hours between the PRC inter-bank bond market and the SEHK may also increase the level of premium or discount of the unit price to its NAV.

13. Trading risks

- The trading price of the units on the SEHK is driven by market factors such as the demand and supply of the units. Therefore, the units may trade at a substantial premium or discount to the Policy Bank Bond ETF's NAV.
- As investors will pay certain charges (e.g. trading fees and brokerage fees) to buy or sell units on the SEHK, investors may pay more than the NAV per unit when buying units on the SEHK, and may receive less than the NAV per unit when selling units on the SEHK.

14. Multi-counter risks

If there is a suspension of the inter-counter transfer of units between the counters and/or any limitation on the level of services by brokers and CCASS participants, Unitholders will only be able to trade their units in one counter only, which may inhibit or delay an investor dealing. The market price of units traded in each counter may deviate significantly. As such, investors may pay more or receive less when buying or selling units traded in one counter on the SEHK than in respect of units traded in another counter.

15. Reliance on market maker risks

- Although the Manager will use its best endeavours to put in place arrangements so that at least one market maker will maintain a market for the units traded in each counter and that at least one market maker to each counter gives not less than 3 months' notice prior to termination of the market making arrangement, liquidity in the market for the units may be adversely affected if there is no or only one market maker for the units on any counter. There is also no guarantee that any market making activity will be effective.
- There may be less interest by potential market makers making a market in units denominated and traded in RMB. Any disruption to the availability of RMB may adversely affect the capability of market makers in providing liquidity for the units.

16. Distributions may not be paid risk

There is no assurance that the Policy Bank Bond ETF will declare to pay dividends or distributions. Investors may not receive any distributions.

17. Distributions payable out of capital or effectively out of capital risk

The Manager may at its discretion pay distributions out of capital, or effectively out of capital, of the Policy Bank Bond ETF. Payment of distributions out of capital or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any such distributions may result in an immediate reduction of the NAV per unit.

18. Other currencies distributions risk

All units will receive distributions in the Base Currency (RMB) only. In the event that a Unitholder has no RMB account, the Unitholder may have to bear the fees and charges associated with the conversion of such distributions from RMB to HKD, USD or any other currency. The Unitholder may also have to bear bank or

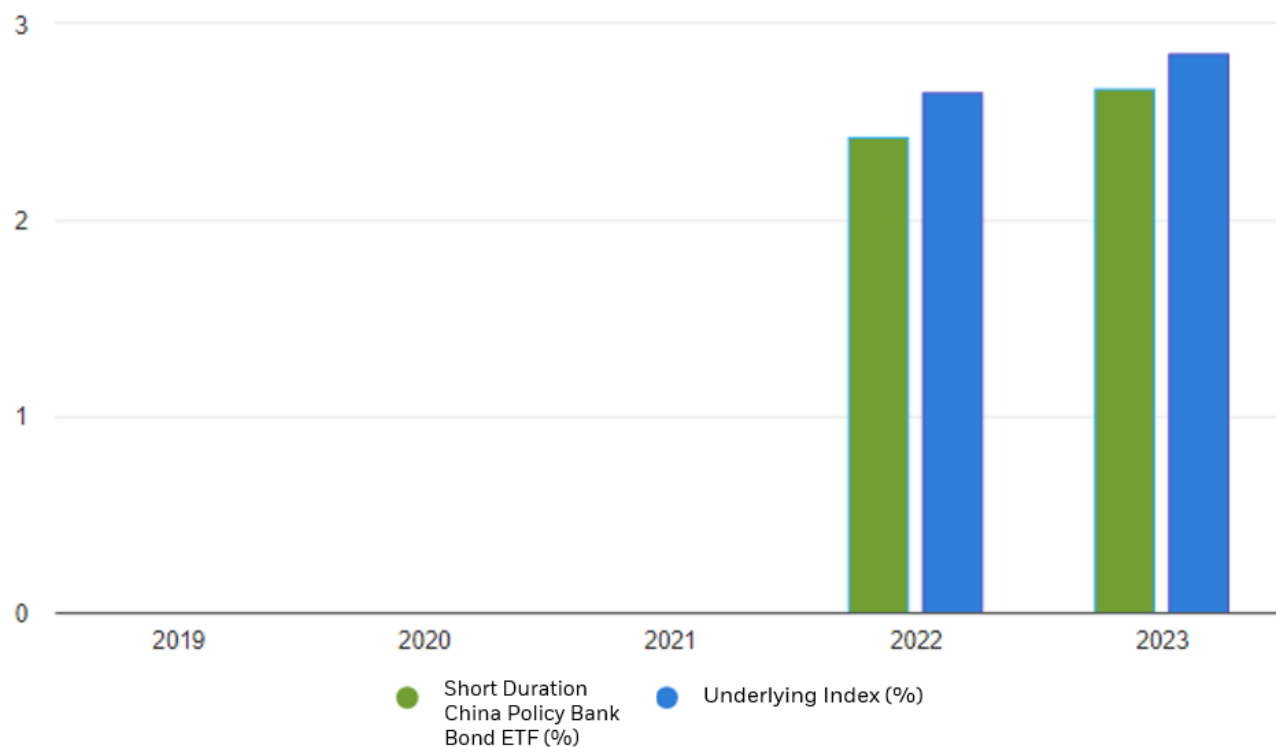

iShares Short Duration China Policy Bank Bond ETF

financial institution fees and charges associated with the handling of the distribution payment. Unitholders are advised to check with their brokers regarding arrangements for distributions.

19. Termination risk

The Policy Bank Bond ETF may be terminated early under certain circumstances, for example, where the Underlying Index is no longer available for benchmarking or if the size of the Policy Bank Bond ETF falls below a pre-determined NAV threshold as set out in the constitutive documents and offering documents. Investors may not be able to recover their investments and suffer a loss when the Policy Bank Bond ETF is terminated.

How has the fund performed?

	2019	2020	2021	2022	2023
Short Duration China Policy Bank Bond ETF Return (%)				2.43	2.67
Underlying Index Return (%)				2.65	2.85

Note: The performance of the Policy Bank Bond ETF prior to 30 April 2024 was achieved under circumstances that no longer apply as the investment strategy of the Policy Bank Bond ETF was amended on 30 April 2024 to enable securities lending.

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-to-NAV, with dividends (if any) reinvested.
- These figures show by how much the Policy Bank Bond ETF increased or decreased in value during the calendar year shown. Performance is calculated in the base currency of the Policy Bank Bond ETF, including ongoing charges and excluding your trading costs on SEHK.

iShares Short Duration China Policy Bank Bond ETF

- Where no past performance is shown there was insufficient data available in that year to provide performance.
- Underlying Index: FTSE Chinese Policy Bank Bond 6 Months-3 Years Index.
- Launch date of Policy Bank Bond ETF: 21 October 2021.

Is there any guarantee?

The Policy Bank Bond ETF does not have any guarantees. You may not get back the amount of money you invest.

What are the fees and charges?

Charges incurred when trading the Policy Bank Bond ETF on SEHK

Fee	What you pay
Brokerage fee	Market Rate
Transaction levy	0.0027% ¹ of the trading price

Management fee	0.2% p.a. of NAV calculated daily
Sub-Managers fee	Included in the management fee
Trustee fee	Included in the management fee
Administration fee	Included in the management fee

Other Fees

You may have to pay other fees when dealing in the units of the Policy Bank Bond ETF. Please refer to the Prospectus for fees and expenses applicable to investing in the Policy Bank Bond ETF.

¹ Transaction levy of 0.0027% of the price of the units, payable by the buyer and the seller.

² Accounting and Financial Reporting Council transaction levy of 0.00015% of the price of the units, payable by the buyer and the seller.

³ Trading fee of 0.00565% of the price of the units, payable by the buyer and the seller.

iShares Short Duration China Policy Bank Bond ETF

Additional information

You can find the following information of the Policy Bank Bond ETF at www.blackrock.com/hk:

- The Policy Bank Bond ETF's Prospectus and this statement (as revised from time to time);
- Latest annual audited financial reports and interim half yearly unaudited financial reports;
- Last NAV (in the base currency only i.e. RMB) and last NAV per unit (in each of the trading currencies i.e. USD, HKD and RMB);
- Near real time indicative NAV per unit updated every 15 seconds during trading hours on each dealing day (in each of the trading currencies i.e. USD, HKD and RMB);
- The Policy Bank Bond ETF's holdings (updated on a daily basis);
- The past performance of the Policy Bank Bond ETF;
- Public notices and announcements made by the Policy Bank Bond ETF;
- Latest list of participating dealers and market makers;
- The tracking difference and tracking error of the Policy Bank Bond ETF; and
- Composition of any distributions paid (i.e. the relative amounts paid out of (i) net distributable income and (ii) capital) or for the last 12 months (whichever is the shorter period).

Please note that the near real time indicative NAV per unit (in each of the trading currencies i.e. USD, HKD and RMB) and the last NAV per unit in HKD and USD are for reference only. The near real time indicative NAV per unit in HKD and USD uses a real time exchange rate between the base currency (i.e. RMB) and each of the trading currencies of HKD and USD. It is calculated using the indicative NAV per unit in RMB multiplied by the real time exchange rate for HKD and USD respectively provided by ICE Data Services. The last NAV per unit in HKD and USD is calculated using the last NAV per unit in the base currency (i.e. RMB) multiplied by the WM Reuters 4:00p.m (London time)* rate for HKD and USD respectively for that dealing day.

All of the information outlined above can be found on the product webpage of the Policy Bank Bond ETF. The product webpage of the Policy Bank Bond ETF can be located by using the search function and inserting the ticker number of the Policy Bank Bond ETF (i.e. 09125, 03125 or 83125) at www.blackrock.com/hk. Investors should note that the website has not been reviewed by the SFC. The product webpage also provides a link to the announcements and notices section of the website where public announcements and notices can be found.

**Please note 4:00p.m (London time) (i) during British Summer Time is equivalent to 11:00p.m Hong Kong Time and (ii) otherwise is equivalent to 12:00a.m. Hong Kong Time*
