What is this product?

Global Corporate Bond Fund (the "**Fund**") is a sub-fund of BlackRock Global Funds ("**BGF**"), an openended investment company incorporated in Luxembourg. Its home regulator is the Commission de Surveillance du Secteur Financier (CSSF).

Objectives and Investment Strategy

To maximise total return by investing at least 70% of the Fund's total assets in investment grade corporate bonds issued by companies worldwide.

The Fund may also invest in emerging markets (such as Brazil, South Africa and South Korea).

Meaning, at the time of purchase BBB– (Standard & Poor's or equivalent) or better by at least one recognised rating agency or, in the opinion of the Management Company, and, where applicable, based on the Internal Credit Quality Assessment Procedure, are of comparable quality.

Subject to applicable regulatory restrictions and internal guidelines, the remaining 30% may be invested in financial instruments of companies or issuers of any size in any sector of the economy globally such as debt and other securities consistent with the Fund's objective, subject to the restriction that no more than 10% of the Fund's assets will be invested in equities.

The Fund's expected total maximum investment in debt instruments with loss-absorption features, including but not limited to contingent convertible bonds, will be less than 30% of its net asset value. These instruments may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s). The Fund's exposure to contingent convertible bonds is limited to 20% of its total assets.

The Fund may use derivatives for hedging, efficient portfolio management and investment purposes. The Fund may employ currency management and hedging techniques which may include hedging the currency exposure on the Fund's portfolio and/or using more active currency management techniques such as currency overlays. Any active management techniques implemented by the Fund through the currency derivatives such as forward exchange contracts, currency futures and options may not be correlated with the primary underlying securities held by the Fund.

The proportion of the Fund's net asset value that is expected to be subject to securities lending transactions from time to time ranges from 0% to 40% and will be consistent with the overall investment policy of the Fund.

Use of Derivatives/Investment in Derivatives

The Fund's net derivative exposure may be up to 50% of the Fund's net asset value.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

1. Investment Risks

The Fund is an investment fund. The Fund's investment portfolio may fall in value due to any of the risk factors below and therefore your investment in the Fund may suffer losses. There is no guarantee of the repayment of principal.

2. Credit Risks

The Fund may be exposed to the credit/default risk of bonds that it invests in. In the event of bankruptcy or default of an issuer, the Fund may experience losses and incur costs.

The actual or perceived downgrading of a rated debt security or its issuers could decrease its value and liquidity, and may have an adverse impact on the Fund, however, the Fund may continue to hold it to avoid a distressed sale.

3. Interest Rate Risks

An increase in interest rates may adversely affect the value of the bonds held by the Fund.

4. Currency Risks

The Fund may invest in assets denominated in a currency other than the base currency of the Fund. Also, a class of shares may be designated in a currency other than the base currency of the Fund. Changes in exchange rates between such currency and the base currency and changes in exchange rate controls may adversely affect the value of the Fund's assets.

The Investment Adviser may utilise techniques and instruments (e.g. currency overlays) in relation to currencies other than the base currency with the aim of generating positive returns. Any active currency management techniques implemented by the Fund may not be correlated with the underlying securities held by the Fund. As a result, the Fund may suffer significant losses even if there is no loss to the value of the underlying securities held by the Fund.

5. Derivatives Risks

Risks associated with derivatives include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. The leverage effect of derivatives can result in a loss significantly greater than the amount invested and extensive exposure to derivatives may lead to a significant loss by the Fund.

Certain derivatives such as derivatives on currencies may be uncorrelated with the underlying securities held by the Fund. In this regard the Fund may suffer significant losses notwithstanding that there may be no loss in respect of the underlying securities positions (predominantly fixed income securities) held by the Fund.

6. Emerging Market Risks

Investment in emerging markets may be subject to a higher than average volatility than more developed markets due to greater political, tax, sustainability related, economic, social, and foreign exchange risks.

The size and trading volume of securities markets in emerging markets may be substantially smaller than developed markets. This may subject the Fund to higher liquidity and volatility risks.

Custody and registration of assets in emerging markets may be less reliable than in developed markets, which may subject the Fund to higher settlement risk.

The Fund may be subject to higher regulatory risks due to low level of regulation, enforcement of regulations and monitoring of investors' activities in emerging markets.

7. Foreign Investments Restrictions Risks

Some countries prohibit or restrict investment, or the repatriation of income, capital or the proceeds from sale of securities. The Fund may incur higher costs investing in these countries. Such restrictions may delay the investment or repatriation of capital of the Fund.

8. Sovereign Debt Risks

Investment in bonds issued or guaranteed by governments or authorities may involve political, economic, default, or other risks, which may in turn have an adverse impact on the Fund. Due to these factors, the sovereign issuers may not be able or willing to repay the principal and/or interest when due.

Holders of defaulting sovereign debt may be requested to participate in the restructuring of such debt. In addition, there may be limited legal recourses available against the sovereign issuer in case of failure of or delay in repayment.

The Fund may have exposure to Eurozone sovereign debts. In light of the fiscal conditions of certain European countries, the Fund may be subject to a number of increased risks arising from a potential crisis in the Eurozone (such as volatility, liquidity, price and currency risks). The performance of the Fund could deteriorate should there be any adverse events in the Eurozone (e.g. downgrade of sovereign credit ratings, default of one or more European countries, or even break-up of the Eurozone).

9. Capital Growth Risks

Risks associated with Fees and/or Dividends Paid Out of Capital

Any distributions involving payment of dividends out of capital (Classes 6, 8 and 10), payment of dividends out of gross income (i.e. payment of fees and expenses out of capital) (Classes 3(G), 6, 8 and 10) or payment of implied interest rate differentials arising from share class currency hedging as dividends (Class 8) amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Whilst all dividends paid result in an immediate reduction of the net asset value per share, these share classes may pay larger dividends (i.e. by paying dividends out of capital, gross income or interest rate differentials arising from share class currency hedging gains (if any)), which may therefore result in a larger reduction in the net asset value per share.

Payment of Dividends From Implied Interest Rate Differentials

For Distributing (R) Shares (Class 8), any dividends payable may include interest rate differentials arising from share class currency hedging gains/losses which may increase/decrease dividends paid. Shareholders of such Distributing (R) Shares will forego capital gains as any currency hedging gains are distributed rather than added to capital. Conversely, currency hedging losses may decrease the dividends paid, and in extreme cases may deduct from capital.

10. Securities Lending Risks

When engaging in securities lending, the Fund will have a credit risk exposure to the counterparties to any securities lending contract. Fund investments can be lent to counterparties over a period of time. A default by the counterparty combined with a fall in the value of the collateral below that of the value of the securities lent may result in a reduction in the value of the Fund.

11. Currency Conversion Risk for Renminbi ("RMB") Denominated Classes

The Fund offers RMB denominated share classes. RMB is currently not freely convertible and is subject to exchange controls and restrictions.

Under exceptional circumstances, payment of realisation proceeds and/or dividend payment (if any) in RMB may be delayed due to the exchange controls and restrictions applicable to RMB.

RMB is traded in both the onshore and offshore markets. While both onshore RMB ("CNY") and offshore RMB ("CNH") represent the same currency, they are traded in different and separate markets which operate independently. The Management Company will apply the CNH rate for currency conversion of RMB denominated share classes. Any divergence between CNH and CNY may adversely impact investors.

12. Liquidity Risks

The size and trading volume of securities in the markets relevant to the Fund may be substantially smaller than developed markets. This may lead to investments in such securities becoming less liquid, making it difficult to dispose of them which may reduce the Fund's returns/lead to losses for investors.

13. Contingent Convertible Bonds Risks

A contingent convertible bond may be converted into the issuer's equity or be partly or wholly written off (a "write-down") if a pre-specified trigger event occurs. Trigger levels differ and the exposure to conversion risk depends on the distance of the capital ratio to the trigger level. In case of conversion into equity, the Fund might be forced to sell these new equity shares. Such a forced sale might have an effect on market liquidity as there may not be sufficient demand for these shares. In the event of a write-down, which may be either temporary or permanent, the Fund may suffer a full, partial or staggered loss of the value of its investment. It might be difficult for the Fund to anticipate the trigger events or how the securities will behave upon conversion.

Investment in contingent convertible bonds may suffer a loss of capital. Further, contingent convertible bonds are usually subordinated to comparable non-convertible securities, and thus are subject to higher risks than other debt securities. Coupon payments on certain contingent convertible bonds may be entirely discretionary and may be cancelled by the issuer, in which event the Fund may experience losses. Investment in contingent convertible bonds may also lead to increased industry concentration risk and thus counterparty risk as such securities are issued by a limited number of banks.

How has the fund performed? Historic performance to 31 December 2023

III During this period the performance of the Fund was achieved under circumstances that no longer apply. The Fund changed its investment policy in 2019 and 2024.

Benchmark†

Past performance information is not indicative of future performance. You may not get back the full amount invested. The computation of the performance is based on the calendar year end, NAV-To-NAV, with dividend reinvested expressed as a % change. These figures show by how much the share class increased or decreased in value during the calendar year shown. Performance data has been calculated in USD, including ongoing charges and taxes and excluding subscription and redemption fees, if applicable. The past performance information reflects the performance of the A2 base currency share class which the Investment Adviser views as the most appropriate representative share class. Please refer to the website www.blackrock.com/hk for performance information regarding other share classes. This website has not been reviewed by the SFC.

[†] The benchmark of the Fund is Bloomberg Global Aggregate Corporate Bond USD Hedged Index (formerly known as Bloomberg Barclays Global Aggregate Corporate Bond USD Hedged Index).
