Prepared on: 01/11/24

This Product Highlights Sheet is an important document.

- It highlights the key terms and risks of the iShares MSCI India Climate Transition ETF (formerly known as iShares MSCI India Index ETF) (the "Fund") and complements the prospectus of the Fund (the "Prospectus")¹.
- It is important to read the Prospectus before deciding whether to purchase units in the Fund ("Units"). If you do not have a copy, please contact us to ask for one.
- You should not invest in the Fund if you do not understand it or are not comfortable with the accompanying risks.
- If you wish to purchase Units in the Fund, you will need to make an application in the manner set out in the Prospectus.

a sub-fund of the iShares Southeast Asia Trust

¹ The Prospectus is available for collection at the Manager's office at Twenty Anson, #18-01, 20 Anson Road, Singapore 079912, during normal Singapore business hours or accessible at <u>https://www.blackrock.com/sg/en/ishares</u>.

² The units in the Fund qualify as an "Excluded Investment Product" ("**EIP**") as defined in the Notice on the Sale of Investment Products (SFA 04-N12) issued by the MAS.

KEY PRODUCT FEATURES	
 KEY PRODUCT FEATURES WHAT ARE YOU INVESTING IN? You are investing in an exchange traded fund constituted as a subfund of an umbrella unit trust in Singapore. The investment objective of the Fund is to track the performance of the Index in US dollar terms. The objective of the Index aims to exceed the minimum technical requirements laid out for European Union ("EU") Climate Transition Benchmarks ("CTBs") in the EU's Delegated Acts on climate benchmarks - Regulation (EU) 2016/1011 as amended by Regulation (EU) 2019/2089, as may be amended or replaced, while maximizing exposure to positive environmental, social and governance ("ESG") factors and maintaining risk and return characteristics similar to those of its underlying market capitalisation weighted index, the MSCI India Index. The MSCI India Index is a free-float adjusted market capitalisation weighted index that is designed to track the equity market performance of Indian securities listed on the National Stock Exchange³ and the BSE Limited (formerly known as the Bombay Stock Exchange). 	Details on the values and construction methodology of the Index are available online at www.msci.com. Refer to the "Index and Indian Share Market" in the "Description of the Index Funds – MSCI India ETF" section of the Prospectus for further information on the Index.
 The Fund will carry out its investment strategy by investing substantially all of its assets in Indian securities. The Manager currently does not intend to make any distributions of the income of the Fund to unitholders. 	
Investment Strategy	
 The Fund includes ESG factors as its key investment strategy, with a focus on climate transition, by tracking the Index. The Manager intends to pursue a Representative Sampling Strategy (i.e. an indexing strategy that involves investing in a representative sample of Indian securities that collectively has an investment profile similar to the Index) to achieve the Fund's investment objective by investing directly in Indian securities. As such, the Manager may overweight the holdings of Indian securities of the Fund relative to the respective weightings of the underlying securities in the Index e.g. where the Manager considers certain securities in the Index should be excluded in view of comparative illiquidity and possible settlement difficulties for such securities, and where there are Indian law limits on holdings by foreign institutional investors. The Fund may invest in financial derivative instruments for hedging and/or efficient portfolio management purposes. 	Refer to "Investment Strategy" in the "Description of the Index Funds – MSCI India ETF" section of the Prospectus setting out the description of the Fund's investment strategy.
	Pofor to "Monorana"
WHO ARE YOU INVESTING WITH?	Refer to "Management
 The Manager is BlackRock (Singapore) Limited. The Sub-Manager is BlackRock Asset Management North Asia Limited. The Trustee and Registrar is HSBC Institutional Trust Services (Singapore) Limited. 	of the Trust' section, "Counterparty Risk of the Custodian" in "Risk Factors" section, and "Termination" in
The Custodian is The Hongkong and Shanghai Banking Corporation Limited.	"Statutory and General Information" section of

³ "National Stock Exchange" means The National Stock Exchange of India Limited.

The The	KEY RISKS AT ARE THE KEY RISKS OF THIS INVESTMENT? value of the Fund and its distributions if any, may rise or fall. se risk factors may cause you to lose some or all of your estment:	the Prospectus for further information on their roles and responsibilities and what happens if the Manager, Trustee or Custodian is insolvent. Refer to "Specific Risks" in the "Description of the Index Funds – MSCI India ETF" section and the "Risk Factors" section of the Prospectus for further information on the risks of investing in the Fund.
	Market and Credit Risks	
	The Fund is exposed to Indian economic and political risks as the market price and liquidity of the Indian securities may be affected by exchange rates and controls, interest rates, changes in Indian governmental policy, taxation, social and religious instability and other political and economic developments affecting India. Liquidity Risks	
	The secondary market may be illiquid. You can sell your Units on the SGX. However you may not be able to find a buyer on the SGX-ST when you wish to sell your Units. While the Fund intends to appoint at least 1 market maker to assist in creating liquidity for investors, liquidity is not guaranteed and trading of Units on the SGX-ST may be suspended in various situations. The National Stock Exchange on which corresponding shares of the India Access Products ("IAPs") are traded may be considered volatile and unstable and Participating Dealers will	
l	be reluctant to create or redeem Units if trading in the underlying Indian securities is suspended.	
	The clearing, settlement and registration systems for Indian stock markets may not be on par with more mature markets and accordingly settlement problems may affect the net asset value ("NAV") and liquidity of the Fund.	
(There is limited liquidity as a disproportionately large percentage of market capitalisation and trading value in the Indian stock exchanges is represented by a relatively small number of issues. The Securities and Exchange Board of India may impose	
	restrictions on trading in Indian securities, limitations on price movements and margin requirements if it believes there are any fraudulent and unfair trade practices, which in turn could adversely impact the liquidity of the Fund.	
	Product-Specific Risks	
	There is no guarantee that the Fund will achieve a high degree of correlation to the Index and therefore achieve its investment objective. Market disruptions and regulatory restrictions could	

have an adverse effect on the Fund's ability to adjust its exposu	
to the required level is order to track the level	re
to the required levels in order to track the Index.	
The tracking error of the Fund may be increased due to the	ne
costs of maintaining the IAPs and spread and foreig	gn
exchange costs. The value of the IAPs represented by a Unit ma	ay
differ from the price of the shares to which the IAPs are linke	ed
leading to an increased tracking error.	
Indian law imposes limits on the ability of foreign portfol	io
investors to acquire shares in certain Indian issuers from tin	
to time, which may force the Manager to use a more representativ	
sampling strategy and in turn increase tracking error.	
As the Manager does not intend to hedge the foreign current	cv
exposure of the Fund, the Fund is exposed to foreig	-
exchange risk between the US Dollar and the Rupee. Furthe	
there can be no assurance that the Indian Government will n	
impose restrictions on foreign exchange and in relation to the	
repatriation of capital.	
• There may be difficulty in obtaining information on India	20
companies as Indian disclosure and regulatory standards are least the part theory theory in contain OFCP (Organization for Forger)	
stringent than those in certain OECD (Organisation for Econom	lic
Co-operation and Development) countries.	
The Fund may invest in financial derivatives, which compare	
to securities can be more sensitive to changes in interest rates	
sudden fluctuations in market prices due to both the low marg	r
deposits required and the higher degree of leverage. Thus, if the	
Fund invests in financial derivatives, there is a risk that its loss	es
may be greater than if it had invested only in securities.	
The Fund may invest in an issuer that could face potential	lly
reduced revenues or increased expenditures from physic	al
