FUND OVERVIEW

- The Fund seeks to provide income and capital growth from its investments in a manner consistent with the principles of environmental, social and governance (ESG) focused investing.
- The Fund will invest globally, directly and indirectly, in the full spectrum of permitted investments including on average, typically two thirds of its total assets in equities and one third of its total assets in fixed income transferable securities (also known as debt securities which may include the Fund investing up to 20% of its total assets in some high yield fixed income transferable securities), as well as investing in units of other funds, cash, deposits and money market instruments. The Fund may invest in companies located in developed markets and emerging markets globally. The Fund will use quantitative (i.e. mathematical or statistical) models in order to achieve a systematic approach to stock selection. This means that stocks will be selected and weightings allocated based on their ESG attributes and on forecasts of return, risk and transaction costs.
- The Fund's total assets will be invested in accordance with its ESG Policy as disclosed in the prospectus. For further details regarding the ESG characteristics please refer to the prospectus and the BlackRock website at www.blackrock.com/baselinescreens. The Fund may obtain indirect exposure (through, including but not limited to, financial derivative instruments (FDIs) (i.e. investments the prices of which are based on one or more underlying assets) and units in collective investment schemes) to securities which may not satisfy these ESG criteria.

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- Emerging markets are generally more sensitive to economic and political conditions than developed markets. Other factors include greater 'Liquidity Risk', restrictions on investment or transfer of assets, failed/delayed delivery of securities or payments to the Fund and sustainability-related risks.
- Equities and equity-related securities can be affected by daily stock market movements. Fixed Income securities can be affected by changes to interest rates, credit risk and potential or actual credit rating downgrades. Non-investment grade FI securities can be more sensitive to these events. ABS and MBS may have high levels of borrowing and not fully reflect the value of underlying assets. FDIs are highly sensitive to changes in the value of the asset they are based on. The impact is greater where FDIs are used in an extensive or complex way.
- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- The Fund seeks to exclude companies engaging in certain activities inconsistent with ESG criteria. Such ESG screening may reduce the potential investment universe and this may adversely affect the value of the Fund's investments compared to a fund without such screening.
- The Fund uses quantitative models in order to make investment decisions. As market dynamics shift over time, a quantitative model may become less efficient or may even present deficiencies under certain market conditions.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.
- Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

GLOSSARY

SFDR Classification: Article 8: Products that promote environmental or social characteristics and promote good governance practices.

Article 9: Products that have sustainable investments as an objective and follow good governance practices. **Other:** Products that do not meet the criteria to be classified as Article 8 or 9.

Modified Duration: A measure of price sensitivity of a bond to changes in interest rates. The Modified Duration of the fund is calculated as the average of the underlying bonds' modified duration values, adjusted to take account of their relative weight (size) within the fund.

Price to Earnings: A valuation ratio of a company's current share price compared to its per-share earnings in the current forecast year, calculated as current share price divided by current earnings per share.

Average Market Cap: The average market capitalization of a fund's equity portfolio gives you a measure of the size of the companies in which the fund invests. Market capitalization is calculated by multiplying the number of a company's shares outstanding by its price per share.

Price to Book Ratio: represents the ratio of the current closing price of the share to the latest quarter's book value per share.
